Applicant(s)

GARAKANI ET AL.

Examiner

Saba Tsegaye

Art Unit

2616

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 04 May 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 21-34 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 21-34 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

1. This Office Action is in response to the amendment filed on 05/04/06. Claims 21-34 are pending. Currently no claims are in condition for allowance.

Claim Objections

2. Claims 28, 30 and 33 are objected to because of the following informalities: claim 28, line 5 missing a punctuation mark; claim 30, line 9, the phrase “; and” is repeated; claim 33, line 6, missing a punctuation mark. Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 21-34 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The “renegotiating only an unselected one” is claimed in claims 21, 28, 30 and 33. However, the specification fails adequately to describe as to what *the only an unselected one* is.

Claim Rejections - 35 USC § 102

5. Claims 21-34 are rejected under 35 U.S.C. 102(e) as being anticipated by Fayad et al. (US 6,757,250) hereafter Fayad.

Regarding claim 21, Fayad discloses a method of negotiating maximal data compression of a modem relay channel, comprising:

determining a first maximal data compression on a first leg (gateway 306 can negotiate with modem 302 the selection of protocols (as known, compression is one of a common protocol type, further, see column 6, line 65-column 7, line 3);

determining a second maximal data compression on a second leg (gateway 308 can negotiate with modem 304);

comparing the first maximal data compression and the second maximal data compression (gateways 306 and 308 are configured to engage into an exchange of capabilities (col. 11, lines 48-49);

selecting an end-to end maximal data compression from the first and second maximal data compressions (gateways 306 and 308 are configured to engage into an exchange of capabilities and agree on the selection of protocols to be used with both modems 302 and 304 (col. 11, lines 48-51));

renegotiating only an unselected one of the first an second maximal data compressions (column 8, line 54-column 9, line 2, column 13, lines 45-53; furthermore, it is inherent to renegotiating only an unselected protocol or rate in data communication system); and

Art Unit: 2616

transmitting data using the end-to-end maximal data compression (information frames can be suitably passed from modem 302 to modem 304) (column 6, line 52-column 7, line 20; column 9, lines 35-50; column 11, lines 31-46) .

Regarding claim 22, Fayad discloses the method further comprising delaying negotiations on the second leg until a maximal data compression on the first leg has been determined (column 9, lines 46-50).

Regarding claims 23, 29 and 34, Fayad discloses the method further inherently comprising storing the end-to-end maximal compression parameters (negotiation posture) in memory (column 11, lines 31-37).

Regarding claim 24, Fayad discloses the method further inherently comprising using the end-to-end maximal compression parameters stored in memory to prevent renegotiation by either the first leg or the second leg (column 11, lines 31-37).

Regarding claim 25, Fayad discloses the method determining a maximal data compression on a first leg further comprising determining a maximal data compression on a called leg (gateway 306 negotiates with modem 302 the selection of protocols), determining a maximal data compression on a second leg further comprising determining a maximal data compression on a calling leg (gateway 308 can negotiate with modem 304).

Art Unit: 2616

Regarding claim 26, Fayad discloses the method further comprising delaying negotiations on the calling leg until notification is received from the called leg (column 11 lines 31-37).

Regarding claim 27, Fayad discloses the method determining a maximal data compression on a first leg further comprising negotiating a maximal data compression on a calling leg and determining a maximal data compression on a second leg further comprising determining a maximal data compression on a called leg (column 11 lines 31-46).

Regarding claim 28, Fayad discloses, in figs. 3, 4 and 6, a network device, comprising:
a connector (306) to allow the device (302) to connect to a network (314) and receive a signal from a remote gateway (308) of maximal data compression on a remote leg (gateway 308 can negotiate with modem 304);

a dual first-pass negotiation mechanism to negotiate a first and a second maximal data compression capability for each of a first and second leg (gateway 306 can negotiate with modem 302 the selection of protocols and gateway 308 can negotiate with modem 304);

an end-to end compression capability determination mechanism to select and end-to-end maximal data compression capability from the first and second maximal data compression capabilities (gateways 306 and 308 are configured to engage into an exchange of capabilities and agree on the selection of protocols to be used with both modems 302 and 304 (col. 11, lines 48-51)); and

Art Unit: 2616

a second pass end-to-end renegotiation mechanism to renegotiate only an unselected one of the first or second maximal data compression based upon the end-to-end maximal data compression capability (column 8, line 54-column 9, line 2; column 13, lines 45-53).

Regarding claim 30, Fayad discloses an article of computer-readable media containing a program (column 3, lines 18-28) that, when executed causes a computer to:

determine a first maximal data compression on a first leg (gateway modem 306 receives a local call from modem 302; data link protocols such as V.42 and the like are suitably provided between modem 302 and gateway 306, further, see column 6, line 65-column 7, line 3);

determine a second maximal data compression on a second leg (gateway 308 can negotiate with modem 304);

compare the first maximal data compression and the second maximal data compression (gateways 306 and 308 are configured to engage into an exchange of capabilities (col. 11, lines 48-49));

select an end-to-end maximal data compression from the first and second maximal data compressions (gateways 306 and 308 are configured to engage into an exchange of capabilities and agree on the selection of protocols to be used with both modems 302 and 304 (col. 11, lines 48-51));

renegotiate only an unselected one of the first and second maximal data compressions (column 8, line 54-column 9, line 2; column 13, lines 45-53); and

transmitting data using the end-to-end maximal data compression (information frames can be suitably passed from modem 302 to modem 304) (column 6, line 52-column 7, line 20; column 9, lines 35-50; column 11, lines 31-46) .

Regarding claim 31, Fayad discloses the program further inherently comprising storing the end-to-end maximal compression parameters (negotiation posture) in memory (column 11, lines 31-3).

Regarding claim 32, Fayad discloses the program further inherently comprising using the end-to-end maximal compression parameters stored in memory to prevent renegotiation by either the first leg or the second leg (column 11, lines 31-3).

Regarding claim 33, Fayad discloses, in figs. 3, 4 and 6, a network device, comprising:
a means for allowing the device to connect to a network (a communication with a second modem 304 through gateway 306; see fig. 3) and receive a signal from a remote gateway (308) of maximal data compression on remote leg (modem 304 negotiates with gateway 308 and gateways 306 and 308 are configured to engage into an exchange of capabilities of both modems 302 and 304);

a means for delaying data compression negotiations until the signal is received (column 11, lines 31-37);

Art Unit: 2616

a means for negotiating a first and second maximal data compression capability for each of a first and second leg (gateway 306 can negotiate with modem 302 the selection of protocols and gateway 308 can negotiate with modem 304);

a means for selecting an end-to-end maximal data compression capability from the first and second maximal data compression capabilities (gateways 306 and 308 are configured to engage into an exchange of capabilities and agree on the selection of protocols to be used with both modems 302 and 304 (col. 11, lines 48-51)); and

a means for renegotiating only an unselected one of the first or second maximal data compression based upon the end-to-end maximal data compression capability (column 8, line 54-column 9, line 2; column 13, lines 45-53); and

a means for signaling the remote gateway that negotiations are complete (column 8, line 1).

Response to Arguments

6. Applicant's arguments with respect to claims 21-34 have been considered but are moot in view of the new ground(s) of rejection.

Applicant argues that the working parameter addressed in Fayad seems to be directed to the “**reliable data link protocols**”. While data compression is mentioned it does not appear to be the working parameters negotiated between the modems and their respective gateways.

Examiner respectfully disagrees with Applicant contention. Fayad clearly discloses that modem 302 and 304 support data ***compression in data link protocol***, such as V.42, both modem 302 and gateway 306 are further able to compress the data on ***this data link*** independent of any other segment and further, transparently to the other segments. See column 6, line 65-column 7, line 3.

Art Unit: 2616

Furthermore, Fayad discloses that gateways are configured to engage into and exchange of capabilities and further agree on the *selection of protocols* to be used with both modems; see column 11, line 48-column 12, line 3). As known, compression is one of a common **protocol** type.

Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

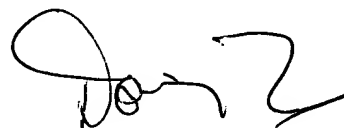

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Saba Tsegaye whose telephone number is (571) 272-3091. The examiner can normally be reached on Monday-Friday (7:30-5:00), First Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Doris To can be reached on (571) 272-7629. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
